

Launch instance

To get started, launch an Amazon EC2 instance, which is a virtual server in the cloud.

Launch instance

Migrate a server [↗](#)

Note: Your instances will launch in the United States (N. Virginia) Region

[Browse more AMIs](#)

Including AMIs from
AWS, Marketplace and
the Community

Create key pair

Key pair name

Key pairs allow you to connect to your instance securely.

proba

The name can include up to 255 ASCII characters. It can't include leading or trailing spaces.

Key pair type

RSA

RSA encrypted private and public key pair

ED25519

ED25519 encrypted private and public key pair

Private key file format

.pem

For use with OpenSSH

.ppk

For use with PuTTY

When prompted, store the private key in a secure and accessible location on your computer. **You will need it later to connect to your instance.** [Learn more](#) [↗](#)

aws

EC2 > Security Groups > sg-0e89a7b9b9e8e01e0 - launch-wizard-1 > Edit inbound rules

Edit inbound rules

Inbound rules control the incoming traffic that's allowed to reach the instance.

Security group rule ID	Type	Protocol	Port range	Source	Description - optional	Actions
sg-0e5efbe980cb8ffdd	HTTPS	TCP	443	Custom	0.0.0.0/0	Delete
sg-0358652d59c27ed15	SSH	TCP	22	Custom	0.0.0.0/0	Delete
sg-0dbba0037ef5cf4ef	HTTP	TCP	80	Custom	0.0.0.0/0	Delete
-	Custom TCP	TCP	8080	Anywhere...	0.0.0.0/0	Delete
-	Custom TCP	TCP	8081	Anywhere...	0.0.0.0/0	Delete

[Add rule](#)

Rules with source of 0.0.0.0/0 or ::/0 allow all IP addresses to access your instance. We recommend setting security group rules to allow access from known IP addresses only.

[Cancel](#) [Preview changes](#) [Save rules](#)
